

COVID-19 Weekly Epidemiological Update

Data as received by WHO from national authorities, as of 4 April 2021, 10 am CET

In this edition:

- [Global overview](#)
- [WHO regional overviews](#)

Erratum: Variants of Concern (VOCs) were incorrectly reported for Mauritania in the previous publications on 23 March and 30 March 2021. The country has not reported any VOCs to date.

Erratum 8 April 2021: In the version published on 6 April, the newly reported cases for the European Region (under the regional narrative) were incorrectly reported due to a typographical error. Data have now been corrected.

Global overview

Globally, new COVID-19 cases rose for a sixth consecutive week, with over 4 million new cases reported in the last week (Figure 1). The number of new deaths also increased by 11% compared to last week, with over 71 000 new deaths reported. The largest increases in case incidence were observed in the South-East Asia (most notably in India) and the Western Pacific regions (Table 1). All regions, except for the African Region, reported increases in the number of deaths, with the largest increase of 46% from the South-East Asia Region.

Figure 1. COVID-19 cases reported weekly by WHO Region, and global deaths, as of 4 April 2021**

**See [Annex: Data, table and figure notes](#)

The highest numbers of new cases were reported from India (513 885 new cases; 38% increase), Brazil (505 668 new cases; 5% decrease), the United States of America (444 756 new cases; 5% increase), Turkey (265 937 new cases; 43% increase), and France (244 607 new cases; 4% decrease).

Table 1. Newly reported and cumulative COVID-19 cases and deaths, by WHO Region, as of 4 April 2021**

WHO Region	New cases in last 7 days (%)	Change in new cases in last 7 days *	Cumulative cases (%)	New deaths in last 7 days (%)	Change in new deaths in last 7 days *	Cumulative deaths (%)

Figure 2. COVID-19 cases per 100 000 population reported by countries, territories and areas, 29 March – 4 April 2021**

**See Annex: Data, table and figure notes

WHO regional overviews

African Region

The Region reported around 59 000 new cases and 1000 new deaths last week, a 6% and 20% decrease respectively compared to the previous week. The highest numbers of new cases were reported from Ethiopia (14 517 new cases; 12.6 new cases per 100 000 population; a 10% increase), Kenya (8747 new cases; 16.3 new cases per 100 000; a 5% decrease), and South Africa (7035 new cases; 11.9 new cases per 100 000; an 8% decrease).

The highest numbers of new deaths were reported from South Africa (306 new deaths; 0.5 new deaths per 100 000 population; a 46% decrease), Ethiopia (152 new deaths; <0.1 new deaths per 100 000; a 11% increase), and Kenya (102 new deaths; 0.2 new deaths per 100 000; a 13% decrease).

Region of the Americas

The Region reported over 1.3 million new cases and over 37 000 new deaths, a 3% and a 15% increase respectively compared to the previous week. Overall, there has been an increasing trend in weekly case incidence over the last six weeks. The highest numbers of new cases were reported from Brazil (505 668 new cases; 237.9 new cases per 100 000; a 5% decrease), the United States of America (444 756 new cases; 134.4 new cases per 100 000; a 5% increase), and Argentina (82 102 new cases; 181.7 new cases per 100 000; a 46% increase).

The highest numbers of new deaths were reported from Brazil (21 094 new deaths; 9.9 new deaths per 100 000; a 26% increase), the United States of America (7536 new deaths; 2.3 new deaths per 100 000; an 8% increase), and Mexico (2992 new deaths; 2.3 new deaths per 100 000; an 18% decrease).

Eastern Mediterranean Region

The Region reported over 297 000 new cases and about 3700 new deaths, a 10% and a 7% increase respectively compared to the previous week. Both cases and deaths are on an upward trajectory with new cases increasing for the past eight weeks. The highest numbers of new cases were reported from the Islamic Republic of Iran (73 471 new cases; 87.5 new cases per 100 000; a 38% increase), Jordan (44 742 new cases; 438.5 new cases per 100 000; a 19% decrease), and Iraq (41 043 new cases; 102.0 new cases per 100 000; an 9% increase).

The highest numbers of new deaths were reported from the Islamic Republic of Iran (691 new deaths; 0.8 new deaths per 100 000; an 18% increase), Jordan (658 new deaths; 6.4 new deaths per 100 000; a 4% decrease), and Pakistan (539 new deaths; 0.2 new deaths per 100 000; a 50% increase).

European Region

After reporting a progressive increase in weekly cases for five weeks, the number of new cases reported this past week is similar to that reported in the previous week, with over 1.6 million new cases reported. The number of new deaths, however, has continued to increase for the past four weeks, with 24 000 new deaths reported. The highest numbers of new cases were reported from Turkey (265 937 new cases; 315.3 new cases per 100 000; a 43% increase), France (244 607 new cases; 374.7 new cases per 100 000; a 4% decrease), and Poland (187 551 new cases; 495.6 new cases per 100 000; a 3% decrease).

The highest numbers of new deaths were reported from Italy (3068 new deaths; 5.1 new deaths per 100 000; a 2% increase), Poland (3057 new deaths; 8.1 new deaths per 100 000; an 18% increase), and the Russian Federation (2634 new deaths; 1.8 new deaths per 100 000; a 3% decrease).

South-East Asia Region

The Region reported over 592 000 new cases and 4300 new deaths, a 36% and a 46% increase respectively compared to the previous week. Case incidence rates have risen markedly through March, with a sharp increase in the past three weeks. The number of new deaths continued to increase in the past three weeks with a steep increase reported in past one week. India contributed 87% of new cases and 71% of new deaths in the Region in the past week. The highest numbers of new cases were reported from India (513 885 new cases; 37.2 new cases per 100 000; a 38% increase), Bangladesh (38 471 new cases; 23.4 new cases per 100 000; a 67% increase), and Indonesia (35 522 new cases; 13 new cases per 100 000; a 2% decrease).

The highest numbers of new deaths were reported from India (3071 new deaths; 0.2 new deaths per 100 000; a 71% increase), Indonesia (878 new deaths; 0.3 new deaths per 100 000; a 4% decrease), and Bangladesh (344 new deaths; 0.2 new deaths per 100 000; a 71% increase).

Western Pacific Region

The Region reported over 106 000 new cases and over 500 new deaths, a 25% and a 5% increase respectively compared to the previous week. A steep increase in the number of new cases has been observed over the past four weeks. The highest numbers of new cases were reported from the Philippines (71 606 new cases; 65.3 new cases per 100 000; a 27% increase), Japan (16 018 new cases; 12.7 new cases per 100 000; a 43% increase), and Malaysia (8968 new cases; 27.7 new cases per 100 000; similar to the previous week).

The highest numbers of new deaths were reported from the Philippines (264 new deaths; 0.2 new deaths per 100 000; a 15% increase), Japan (190 new deaths; 0.2 new deaths per 100 000; a 13% decrease), and Malaysia (35 new deaths; <0.1 new deaths per 100 000; a 59% increase).

Annex 3. Data, table and figure notes

Data presented are based on official laboratory-confirmed COVID-19 case and deaths reported to WHO by country/territories/areas, largely based upon WHO [case definitions](#) and [surveillance guidance](#). While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change, and caution must be taken when interpreting these data as several factors influence the counts presented, with variable underestimation of true case and death incidence, and variable delays to reflecting these data at global level. Case detection, inclusion criteria, testing strategies, reporting practices, and data cut-off and lag times differ between countries/territories/areas. A small number of countries/territories/areas report combined probable and laboratory-confirmed cases. Differences are to be expected between information products published by WHO, national public health authorities, and other sources. Due to public health authorities conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, negative numbers may be displayed in the new cases/deaths columns as appropriate. When additional details become available that allow the subtractions to be suitably apportioned to previous days, graphics will be updated accordingly. A record of historic data adjustment made is available upon request by emailing epi-data-support@who.int. Please specify the country(ies) of interest, time period(s), and purpose of the request/intended usage. Prior situation reports will not be edited; see covid19.who.int for the most up-to-date data. Global totals include 745 cases and 13 deaths reported from international conveyances.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region. The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by WHO in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

^[1] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

ⁱ Excludes countries, territories, and areas that have never reported a confirmed COVID-19 case (Annex 1), or the detection of a variant of concern (Annex 2).

ⁱⁱ Transmission classification is based on a process of country/territory/area self-reporting. Classifications are reviewed on a weekly basis and may be revised as new information becomes available. Differing degrees of transmission may be present within countries/territories/areas. For further information, please see: [Considerations for implementing and adjusting public health and social measures in the context of COVID-19](#):

- No (active) cases: No new cases detected for at least 28 days (two times the maximum incubation period), in the presence of a robust surveillance system. This implies a near-zero risk of infection for the general population.
- Imported / Sporadic cases: Cases detected in the past 14 days are all imported, sporadic (e.g., laboratory acquired or zoonotic) or are all linked to imported/sporadic cases, and there are no clear signals of further locally acquired transmission. This implies minimal risk of infection for the general population.

- Clusters of cases: Cases detected in the past 14 days are predominantly limited to well-defined clusters that are not directly linked to imported cases, but which are all linked by time, geographic location and common exposures. It is assumed that there are a number of unidentified cases in the area. This implies a low risk of infection to others in the wider community if exposure to these clusters is avoided.
- Community transmission: Which encompasses a range of levels from low to very high incidence, as described below and informed by a series of indicators described in the aforementioned guidance. As these subcategorizations are not currently collated at the global level, but rather intended for use by national and sub-national public health authorities for local decision-making, community transmission has not been disaggregated in this information product.
 - CT1: Low incidence of locally acquired, widely dispersed cases detected in the past 14 days, with many of the cases not linked to specific clusters; transmission may be focused in certain population sub-groups. Low risk of infection for the general population.
 - CT2: Moderate incidence of locally acquired, widely dispersed cases detected in the past 14 days; transmission less focused in certain population sub-groups. Moderate risk of infection for the general population.
 - CT3: High incidence of locally acquired, widely dispersed cases in the past 14 days; transmission widespread and not focused in population sub-groups. High risk of infection for the general population.
 - CT4: Very high incidence of locally acquired, widely dispersed cases in the past 14 days. Very high risk of infection for the general population.
- Pending: transmission classification has not been reported to WHO.

iii “Territories” include territories, areas, overseas dependencies and other jurisdictions of similar status.
